SKILLRADAR MY · SDC 2026 · DOMAIN 1

Demo video cue sheet 4:10 to 6:00

One slide per beat. Left: what to show. Right: what to say.
Every link opens the exact file on GitHub, so nothing has to be remembered.

github.com/douyinlin/sdc2026-lumina-nusantara

4:10 - 4:20

Where the data comes from

ON SCREEN

· GitHub README, Data sources table
· then data/trends/dosm_q2_2026.json
· stop on source_url, latest_released, extraction_note

SAY THIS

“Three sources, kept separate. DOSM publishes advertised vacancies by occupation - we transcribe the counts by hand and keep the link, the date and a note on what it cannot support, inside the JSON itself.”

LINKS

README data sources
dosm_q2_2026.json
wef_future_jobs_2025.json

Hold 2 seconds on extraction_note - it is the honesty proof.

4:20 - 4:35

What the program does, what the AI does

ON SCREEN

· App results page - point at the score
· then src/utils.py - the scoring function

SAY THIS

“The running application has no model. Parsing is keyword matching, scoring is five weighted rules in this file, and the pathway is a lookup over a curated catalogue. Same profile, same answer, every time - and every point is explainable.”

LINKS

src/utils.py (scoring)
src/cv.py (parsing)
src/trends.py

Never say AI scores the user. AI is not on the request path.

4:35 - 4:50

Where AI actually helped

ON SCREEN

· Terminal, already cd'd into the repo
· python -m unittest discover -s tests -p "test_*.py"
· let it finish: 54 tests, OK

SAY THIS

“AI tools were used to write this code - DeepSeek, Copilot, Codex. Every change was read, run and tested before it was kept: that run is 54 automated tests, all passing.”

LINKS

tests folder
Technical Declaration, section 4.3

Clear the terminal first (cls). No personal paths on screen.

4:50 - 5:00

Replit and RunPod

ON SCREEN

· PDF viewer: submission/REPLIT PROOF OF USE.pdf
· scroll one page

SAY THIS

“Replit was our development workspace; the screenshots are in the submission folder. RunPod is not used - there is no GPU endpoint in this project, and the Technical Declaration says so.”

LINKS

Replit proof
Technical Declaration

Say used / not used in one breath. Do not explain why RunPod is unused.

5:00 - 5:20

SDG mapping

ON SCREEN

· App, scroll to the SDG section
· point at the skill-level tags, not the big icons

SAY THIS

“The track is SDG 4, sub-target 4.4 - skills for employment - with 8.5 as the second target. The mapping goes down to individual skills, and we label it as our own reading, not an official UN mapping.”

LINKS

skills_sdg.json (54 skills)
README, SDG row

Point at the skill chips. Icon-only is explicitly not enough.

5:20 - 5:40

What we tested, honestly

ON SCREEN

· App: the source-robustness table
· or the terminal still showing the test run

SAY THIS

“What we tested: 54 automated tests, every flow in three languages on synthetic profiles, and 60 course links checked as reachable. What we have not done: a user study. Phase 2 targets ten testers, a median plan under five minutes, and 70% rating a top-three role at least 4 out of 5. Targets, not results.”

LINKS

courses.json (60 links)
sample_cv.txt (synthetic)

Keep the last sentence: targets, not results.

5:40 - 6:00

Limits and next steps

ON SCREEN

· README, Known limitations
· or the last slide of the deck

SAY THIS

“Known limits: the occupation-to-skill mapping is our heuristic, one quarter is not a trend, course fees are unverified, and the parser misses synonyms. Next: verified course metadata, semantic CV parsing, and the user pilot. Everything planned is labelled as planned.”

LINKS

README, limitations
Deck, slide 9 (roadmap)

Close on the product, not on the caveats.
